Stockton, California

PEARS

Are you contemplating the planting of Pear trees? If so, you want to know how to control pear blight and therefore you should use our blight resistant stocks.

We have Old Home on French and Calleryana root, for your different soil types. Besides these stocks, we can furnish selected heavy bearing types of Bartlett and Winter Pears on these root stocks for delivery this coming season.

If you are planning to set out Pears this season, it will be greatly to your advantage to consult with us about your problems, as we are the largest growers and specialists in Pears in the State, and our experience is at your service.

CHERRIES

Do you know that there are less Cherry trees in this State now than there were five years ago, and that is because these Cherries have been grown on the wrong root stocks which will not stand adverse soil and moisture conditions.

We have solved this problem by the use of the wild Morello root stock, which will grow under any average soil condition, come into bearing in the third year, and produce heavy annual crops with no off seasons.

PRUNES

You know the average Prune grower is not making what he should from his orchard, principally because of the small sizing of his Prunes. In the Stuart Prune one can not help but realize much greater profits, as it always produces 20-30s alongside of the French Prune averaging only 60-70s.

This Prune has been thoroughly tested for many years and has been adopted recently by several of the largest and most experienced fruit growers in this State because of its high quality, regular, heavy bearing and persistently large size.

WALNUTS

If you are planting Walnuts this season and want the best type of nursery selected Walnuts with well branched root systems, we have a fine large stock of them now growing in our nursery and would like to have you come and see their excellent growth.

CHESTNUTS

Do you know that the Chestnut has a great future for commercial planting in California, as all the present commercial orchards in this State are exceedingly profitable? The Chestnut indus-

try here has proven successful from every standpoint, so consult us for further information on this excellent crop.

PEACHES

If you are troubled with alkali in your Peach orchard, we have Davidiana seedlings, which will grow in these alkali spots, and then you can bud or graft your own variety of Peaches on these seedlings.

GRAPES

The Ribier Grape is one of the most talked-of Grapes today, with record market prices because of its high quality. It is a large black grape that has both excellent juice and table value. We have cuttings of this Ribier and many other leading new varieties of table and wine Grapes, which we can furnish this coming season.
